

**Aviation Safety Investigation Report
198902557**

Piper PA36-375 Brave

28 May 1989

Readers are advised that the Australian Transport Safety Bureau investigates for the sole purpose of enhancing transport safety. Consequently, Bureau reports are confined to matters of safety significance and may be misleading if used for any other purposes.

Investigations commenced on or before 30 June 2003, including the publication of reports as a result of those investigations, are authorised by the CEO of the Bureau in accordance with Part 2A of the Air Navigation Act 1920.

Investigations commenced after 1 July 2003, including the publication of reports as a result of those investigations, are authorised by the CEO of the Bureau in accordance with the Transport Safety Investigation Act 2003 (TSI Act). Reports released under the TSI Act are not admissible as evidence in any civil or criminal proceedings.

NOTE: All air safety occurrences reported to the ATSB are categorised and recorded. For a detailed explanation on Category definitions please refer to the ATSB website at www.atsb.gov.au.

This accident was not formally investigated by the Bureau.

Occurrence Number: 198902557 **Occurrence Type:** Accident
Location: Pine Hills (near Boorowa) NSW
Date: 28 May 1989 **Time:** 1200
Highest Injury Level: Nil
Injuries:

	Fatal	Serious	Minor	None
Crew	0	0	1	1
Ground	0	0	0	-
Passenger	0	0	0	0
Total	0	0	0	1

Aircraft Details: Piper PA36-375 Brave
Registration: VH-FGF
Serial Number: 36-7902011
Operation Type: Aerial Work
Damage Level: Substantial
Departure Point: Pine Hills NSW
Departure Time: 1145 Approx.
Destination: Pine Hills NSW

Approved for Release: 4th June 1990

Circumstances:

The pilot was attempting the first landing of the day on an airstrip which was about 800 metres in length. It had appreciable longitudinal slope and the surface was covered in long wet grass. The landing direction was up hill with a quartering tail wind from the left. The pilot reported that the aircraft touched down about half way along the strip and that he anticipated the slope would provide the necessary retardation. As the roll progressed, it became apparent the aircraft could not be stopped on the remaining strip so a ground loop to the left was initiated. The aircraft slid sideways into a Superphosphate dump at the end of the strip and damaged the right aileron, right fuselage and tailplane.
