

**Aviation Safety Investigation Report
198700720**

Pegase 101A

2 February 1987

Readers are advised that the Australian Transport Safety Bureau investigates for the sole purpose of enhancing transport safety. Consequently, Bureau reports are confined to matters of safety significance and may be misleading if used for any other purposes.

Investigations commenced on or before 30 June 2003, including the publication of reports as a result of those investigations, are authorised by the CEO of the Bureau in accordance with Part 2A of the Air Navigation Act 1920.

Investigations commenced after 1 July 2003, including the publication of reports as a result of those investigations, are authorised by the CEO of the Bureau in accordance with the Transport Safety Investigation Act 2003 (TSI Act). Reports released under the TSI Act are not admissible as evidence in any civil or criminal proceedings.

NOTE: All air safety occurrences reported to the ATSB are categorised and recorded. For a detailed explanation on Category definitions please refer to the ATSB website at www.atsb.gov.au.

Occurrence Number: 198700720
Location: Waikerie SA
Date: 2 February 1987
Highest Injury Level: Serious
Injuries:

Occurrence Type: Accident

Time: 1527

	Fatal	Serious	Minor	None
Crew	0	1	0	0
Ground	0	0	0	-
Passenger	0	0	0	0
Total	0	1	0	0

Aircraft Details: Pegase 101A
Registration: VH-HDJ
Serial Number:
Operation Type: Private-Gliding
Damage Level: Destroyed
Departure Point: Waikerie SA
Departure Time: 1527
Destination: Waikerie SA

Approved for Release: March 2nd 1987

Circumstances:

The glider was being launched via an aero-tow. It became airborne after a short ground run and climbed to a higher than normal altitude. The pilot attempted to correct the situation but the glider bounced twice on the strip, breaking off the tail skid. As the glider climbed away it continued to oscillate in a position above the tug aircraft. The tow rope was released when the glider was about 120 feet above ground level and the pilot, believing that there was insufficient runway remaining to land, attempted to turn back for a landing on the strip. During the turn the glider entered a spin subsequently striking the ground in a nose low attitude. The pilot was inexperienced on the aircraft type, having not flown the type for about two months. On the day there was a gusty wind blowing and it was the opinion of experienced local pilots that a landing straight ahead after rope release would have been possible.
